New Vehicle Sales Trend Turns Positive

For those who are only interested in total new-vehicle sales because it is an indicator of what the overall economy is doing, the news is encouraging. New-vehicle sales in March 2010 were up 24.3% compared to March 2009. Keep in mind that in Mar 2009 new-vehicle sales dropped 36.9% compared to 2008 after having decreased 11.8% from 2007. Auto sales have definitely gained ground, but still have not reached the level we were accustomed to just three years ago.

Mopar To Rise Again

Finally, someone at Chrysler has realized what a strong brand Mopar is. After all it has been there through the early days of the auto industry, the advent of muscle cars and a solid player in motorsports.

Honeywell Expects US Turbo Market Growth

Honeywell expects to see a significant increase in demand for turbocharged vehicles in the U.S. as a result of the new Environmental Protection Agency (EPA) and the U.S. Department of Transportation (DOT) standards announced recently. The Federal rules will effectively increase the average fuel economy of new cars and trucks to 35.5 mpg by 2016. As a result, Honeywell expects the number of new, turbocharged cars sold in the U.S. to grow from five percent today to as much as 25% in the next five years.
